

 EFT Server *Enterprise*

“The worlds most advanced enterprise file transfer server”

With each new day, data transfer and processing needs can increase and change. New offices, partners, vendors, clients, and users—each with their own unique role in business operations—demand access to data while you strive to maintain security. Meanwhile, business processes and data consumers require constant attention to keep operations moving forward. Isn't there a smarter way to manage data?

Features

Automate processes and workflows with out the need to code. Choose from over 200 actions triggered on server events, hot folders, or recurring schedules.

- Comply with standards such as the PCI-DSS and FIPS 140-2 Validation
- Exchange EDI or data with a full suite of secure connection protocols including AS2, FTPS, SFTP, and HTTPS
- Protect data with PGP encryption and a bidirectional DMZ Gateway Server
- Automate processes and workflows with over 200 actions triggered on server events, hot folders, or recurring schedules
- Maintain tighter control with expanded auditing (SQL & Oracle) capabilities, customizable reporting, and real-time activity monitoring
- Choose from expanded authentication options including LDAP, AD, NTLM, or ODBC
- Manage account and password policies and enjoy administrative flexibility with role-based admins, web services, and a COM API
- Available in both 32-bit and native 64-bit versions

An Enterprise Solution for Enterprise-Level Problems

EFT Server Enterprise takes secure file transfer to the next level. To meet increased security requirements, the enterprise platform supports AS2 and Open-PGP encryption on top of the standard HTTP/S and SFTP (SSH2) protocols. In Addition, administrators can automate business processes and automation using the intuitive workflow programming interface without the need for code, scripting, or complicated batch files.

GlobalSCAPE EFT Server is positioned in the Leader's Quadrant of the Gartner Magic Quadrant for the Managed File Transfer (MFT) market.
